

**APPLICATION CONTROL IN PEER-TO-PEER
AD-HOC COMMUNICATION NETWORKS**

ABSTRACT

A computer system, method, and computer program product for controlling access to an
5 application program in a wireless device connected to an ad-hoc communications network. The
method comprises sending an inquiry message to the network, receiving a response, choosing a
selected application, and examining control parameters associated with the selected application.
The control parameters dictate a behavior of the selected application such as allowing or refusing
communication with the selected application. When a nearby wireless device includes a
10 matching application, connecting the selected application and the matching application further
comprises sending a connection request, receiving connection response, launching the selected
application, and sending a service request. When the selected application closes, the method
further comprises erasing the selected application. To choose the selected application, the
method further comprises retrieving an entry from a distributed application directory or selecting
15 the application based on a priority assigned to the entry.
